About this report

Our report draws on five main sources:

- Our global data model with 9.7 million data points
- Our annual global client perception survey of senior end-users of consulting firms
- Our interviews with senior management consultants from a range of consulting firms
- Our in-depth desk research on the market
- Our geography-specific survey focusing on how different trends are affecting clients' organisations and their use of consulting

Our global data model is the biggest and most sophisticated model of the professional services industry available. It provides data on market size, growth rates, and forecasts across 29 industries, 12 service lines, 84 countries, and five firm types. It's the platform on which a growing number of professional services firms are basing their understanding of the market and their performance within it.

Introduction

The COVID-19 pandemic has changed our lives, our communities, the global economy, and the consulting market, and its impact is likely to be felt for some considerable time to come. Against this backdrop, we wanted to develop a report that is as useful as possible in understanding the immediate impacts of the crisis while helping firms navigate a way forward.

Once the recovery starts, clients' needs will be dictated by the needs that were already there, coloured by recent events. Therefore, understanding both the situation before the crisis and the things that are changing right now will be essential for firms to support clients through the recovery. With this in mind, this report includes the following:

- In-depth analysis of the consulting market in 2019, including key trends, and analysis of demand by sector and service
- A look at how COVID-19 is changing the market currently and an assessment of the sectors and services most likely to experience demand once the situation improves
- Commentary around how firms will need to change what they do and how they do it in order to meet client expectations in a changed landscape
- A link to our latest forecasts for 2020

We have drawn on a number of data sources in order to develop our analysis:

- We've built a bottom-up model of the global consulting market from the information we get from consulting firms and our own research, and we use this to size the industry and its growth rates. This is based on our global model, which contains detailed data about almost 1,600 firms plus higher-level estimates about a further 400,000 firms, all with more than 50 consultants apiece, in addition to comprehensive primary research carried out by Source analysts.
- We're very grateful for the input of a wide range of firms, who are helping us assess the impact of COVID-19 on the market by providing up-to-the minute information that we are using on an ongoing basis to adjust our existing model of the industry.
- We also carried out two client surveys to help us build a rich picture of how different trends in DACH are affecting clients' organisations and their use of consulting, covering:
 - how clients expect to use consultants over 2020 and into 2021
 - factors that affect how clients work with consulting firms
 - the ways consulting firms market themselves to clients and the impact this has on client decision making.

Although these surveys were completed prior to the COVID-19 outbreak, this gives us some insight into clients' priorities going into the crisis.

 **COVID-19 model**

The DACH consulting market in 2019

Overview

2019 was a disappointing year for the DACH consulting market. Growth of 4.4% was lower than that seen in both 2017 and 2018, largely thanks to a general climate of uncertainty in the market, fuelled by anxiety about the impact of Brexit and worries about the US-China trade war. The slide in growth rate was particularly stark for the dominant Germany market, where an increase in revenues of just 4.6% in 2019 compared very badly to growth rates exceeding 8% seen in both 2017 and 2018.

Greater certainty about Brexit at the very end of the year brought some relief but this was offset by growing fears about an economic downturn, and all of this meant that more conservative clients were reluctant to commit to major investment programmes. Instead, many preferred to ready themselves for the expectation of harder times ahead, by focusing on more tactical performance improvement and cost-cutting initiatives.

We see that Brexit and potential trade barriers have stirred up questions and uncertainties in the export industry. With a clear lack of confidence, investments were much slower than the previous year and in some markets we saw projects delayed as a result.

Edgar Klein, Deloitte

In the last quarter of 2019, we started to see the real impact of a potentially upcoming economic downturn. Some consulting projects in the automotive and construction industries were cancelled as work was either brought in-house, re-evaluated, or cancelled outright.

Nikolaus Schmidt, Haufe Consulting

Economic developments over the past year have impacted digital spend, particularly in industrial manufacturing companies as they are the first to be affected by economic downturns but have also been the slowest to react.

Dr. Uwe Michel, Horváth & Partners

As we expected, 2019 was a bit slower than 2018. Work around digitisation issues, new business models, and innovation declined and it became more about performance improvement following the downward swing in the economic cycle. The market growth was more 2-7% rather than the 7-12% we'd seen previously.

Stefan Schaible, Roland Berger

Huge technology disruption and the need for model change was a double-edged sword in 2019: On the one hand it encouraged more forward-looking clients to embrace the need to transform, leading to good volumes of demand for many firms. But for other clients, the difficulties around identifying the right path to take left them paralysed by indecision, and this added to the general climate of uncertainty.

One of the biggest challenges in the market is overcoming the uncertainty our clients are experiencing. They are struggling to determine what the right strategy and business model will be for the next 10 years, and it's making it hard for consultants.

Marco Lehmann, KPMG

Digital was a big topic in 2019 in automotive and transportation and it will remain a large consulting business line. The car makers are working on that in a really big way, since they own the interface with the consumers. There are also a lot of start-up companies, including players from other industries like tech, electronics, or software, that are engaging consultants to help them build their business models or establish their companies.

Christian Koehler, Strategy Engineers

Three things that changed in 2019

- 1 Lower growth:** The DACH consulting market experienced its worst year since 2012, thanks to cautious clients limiting major new investments in large-scale transformation work and focusing instead on the health of the bottom line.
- 2 Slowly growing interest in digital:** DACH clients continue to lack the enthusiasm of their peers in more advanced markets for all things digital, but consumer demand, global competition, and the recognition of technology's value in improving efficiency all combined to encourage greater investment in digital technologies, with cloud and data & analytics work proving particularly good sources of demand.
- 3 Sustainability moved into the mainstream:** Society's growing interest in all things related to climate change and becoming more sustainable started to influence consulting budgets, with clients from a whole range of industries beginning to look for help to achieve genuine change.

Contributors

We are extremely grateful to all the people we spoke to for making this report possible. Below is a list of individuals who have contributed (excluding those consultants who wished to remain anonymous).

White Space

A powerful research tool that allows subscribers to keep up to date with the latest content being produced and maximise their return on investment. A series of reports that analyse the quality and effectiveness of thought leadership are published throughout the year.

Our custom work

We provide advice and custom research services to the world's most successful professional services firms, helping them to identify, and develop strategic responses to, their most pressing opportunities and challenges.

Among other things, our work includes:

- Deep market and competitor analysis
- Acquisition strategy
- Proposition strategy and development
- Brand and client sentiment analysis
- Thought leadership and content strategy, development, and review

For more information about any of these, please visit our website or get in touch.

Source Global Research is a leading provider of information about the market for professional services.

Set up in 2007, Source serves the professional services industry with expert analysis, research, and reporting. We draw not only on our extensive in-house experience but also on the breadth of our relationships with both suppliers and buyers. All of our work is underpinned by our core values of intelligence, integrity, efficiency, and transparency.
