The Japan Consulting Market in 2020

Market Trends Programme

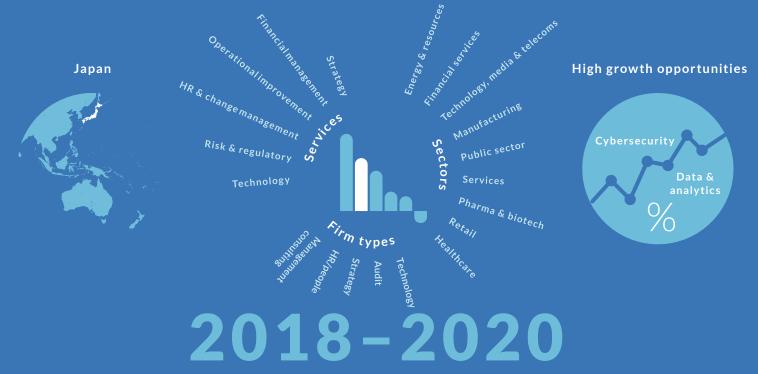

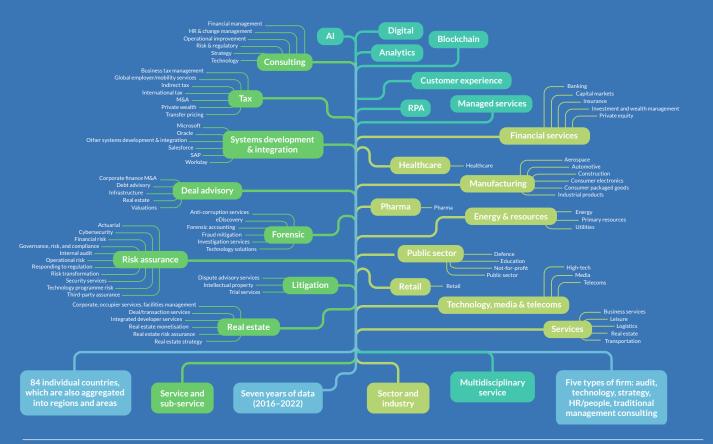

What's included in this report

Our reports offer a wealth of market sizing, growth, and forecast data alongside engaging, in-depth analysis of the trends that matter.

What else we cover

Our highly flexible, multidimensional model provides firms with robust, trusted data to make informed decisions about strategic investments and plan for the future.

How we can help your firm to deal with what's happening now and prepare for what comes next

Even before COVID-19, the professional services industry was entering a period of change the likes of which it had never experienced. But the pace of that change is now being accelerated, as firms respond to the crisis and reimagine their future in a changed world. We're working side by side with them, using our experience, data, and deep sector knowledge to help them create effective strategies for extraordinary times.

Real-time forecasting

Since mid-March, we've been supplementing our unique model of the global professional services sector with data collected from hundreds of consulting firms around the world. Our weekly updates have become the industry's satnay, providing up-to-date estimates of the likely impact of the crisis by region, sector, and service, which change as the market changes, helping consulting firms to adjust their strategy accordingly. But this publicly available data is for the market as a whole, and every firm faces a unique set of challenges. As you plan for the next 12-18 months, we can provide forecast data that's tailored to your business.

Immediate market feedback

One of the biggest challenges facing consulting firms is uncertainty: How has client behaviour changed as a result of the crisis? Whether we're leveraging our own research carried out over the previous few weeks, or undertaking custom research around your services and markets, we can provide you with quantitative and qualitative feedback very quickly, enabling you to take quick and informed decisions.

Past crises have shown that the speed with which a consulting firm adapts its services will determine its resilience and that's truer than ever in the current environment, when clients' expectations around what's possible have radically shifted. They're looking to consulting firms to deliver better, faster solutions—and consulting firms will need to respond by being more precise about where they can add tangible value and more compelling in the way they articulate this. We've worked with many firms over the last decade helping them test their ideas with clients.

About us

— We're nerds: We take a data-driven approach to helping firms take investment decisions. Since we started, we've invested millions in sophisticated, proprietary research techniques that give us unique insights into current and future trends.

We're experts: We've been focusing exclusively on the professional services sector for more than a decade, and we keep our knowledge up to date by interviewing hundreds of senior partners in professional services firms around the world each year.

We're future-focused: We undertake the largest regular quantitative surveys of the professional services sector anywhere in the world, and we're constantly talking to professional services firms' clients in order to understand how changes in their behaviour will reshape the industry in the future.

We're independent: Our analysis and recommendations are derived from our data and experience. We don't recommend firms to clients, and we will never tell you what you want to hear just because you've paid us.

We're obsessed with value: Our information and insights have underpinned some of the most strategic investment decisions made by professional services firms. That's because we know that, if we're going to have an impact, how we communicate is as important as what we communicate.

We're easy to work with: We'll work with you as you want, whether that's providing you with off-the-shelf data or multi-country custom research. Because we want our work to add value, we charge for what you need. We don't run a meter and we don't have complicated licensing that limits who can read our material.

Explore the data

All of the market size data in this report is available to explore online through our global data model portal. You are able to interact with the data in more detail and create custom views of the market to suit your needs.

Our global data model is the biggest and most sophisticated model of the professional services industry available. It provides data on market size, growth rates, and forecasts across 29 industries, 12 service lines, 84 countries, and five firm types. It's the platform on which a growing number of professional services firms are basing their understanding of the market and their performance within it.

Introduction

The COVID-19 pandemic has changed our lives, our communities, the global economy, and the consulting market, and its impact is likely to be felt for some considerable time to come. Against this backdrop, we wanted to develop a report that is as useful as possible in understanding the immediate impacts of the crisis while helping firms navigate a way forward.

Once the recovery starts, clients' needs will be dictated by the needs that were already there, coloured by recent events. Therefore, understanding both the situation before the crisis and the things that are changing right now will be essential for firms to support clients through the recovery. With this in mind, this report includes the following:

- Analysis of the consulting market in 2019, including key trends and analysis of demand by sector and service
- Insights from firms around demand drivers in 2019 and how this is being reshaped in 2020, as well as how they are organising themselves and approaching the market
- A link to our latest forecasts for 2020

Recognising how quickly the consulting market is changing in 2020 as it is reshaped by the pressures of COVID-19, we will also provide subscribers with regular, monthly updates during the second half of the year. These will include our latest thinking about the impacts of the crisis, together with global forecasts split by region and accompanied by high-level commentary.

We have drawn on key data sources in order to develop our analysis:

- We've built a bottom-up model of the global consulting market from the information we get from consulting firms and our own research, and we use this to size the industry and its growth rates. This is based on our global model, which contains detailed data about almost 1,600 firms plus higher-level estimates about a further 400,000 firms, all with more than 50 consultants apiece, in addition to comprehensive primary research carried out by Source analysts.
- We're very grateful for the input of a wide range of firms, who are helping us assess
 the impact of COVID-19 on the market by providing up-to-the-minute information
 that we are using on an ongoing basis to adjust our existing model of the industry.

The Japan consulting market in 2019

Overview

2019 was a very good year for the consulting market in Japan—an uptick of 10.5% topped even 2018's stellar growth rate. This was all the more impressive given continued client worries about the US-China trade tensions and the knocks experienced by the Japanese economy towards the end of the year, in the form of a hike in VAT rates and the destruction wreaked by Typhoon Hagibis.

Despite these headwinds, there were two major factors that drove increased demand in 2019. The first was a strong appetite for growth on the part of many Japanese clients keen to take their products and services to vibrant neighbouring markets in South East Asia, and set up manufacturing bases in the region to expand their options beyond China. The second was enthusiastic digital take-up. There was some bifurcation here, with many clients, spurred on by the new, more restrictive labour laws, principally interested in digitisation for its cost and efficiency benefits. At the same time, other clients—particularly the very largest buyers of consulting—took a bolder approach to digitisation, aimed at broader, cross-functional change, in order to cope with competition from digital natives and changing consumer behaviour. While there remains some frustration on the part of consultants that clients have been slow to take this more holistic approach to digitisation, there is agreement that the digital trend has accelerated—and indeed will continue to do so in 2020 as clients look to deal with the fallout from COVID-19.

For all clients, data & analytics work was an important component of digital change, and a strong appetite for support resulted in data & analytics work increasing by 12% in 2019, outpacing growth in the overall consulting market. Demand for cybersecurity help also grew quickly, as clients woke up to the new vulnerabilities created by increasing reliance on technology.

Elsewhere, there was a solid uptick in strategy work, as firms supported Japanese organisations with growth strategies, and risk consultants also found themselves sought after to help clients de-risk their investments in new markets.

Looking at the market through a sector lens, the two largest consulting markets financial services and manufacturing—both improved on their 2018 performance and saw demand increase broadly in line with the overall market. Financial services consultants benefited from the sector's interest in digitisation, with clients keen to make operations more efficient as well as upgrade the customer experience. The manufacturing market was a busy one. The US-China trade war has been beneficial for the sector in some ways, as it has damaged Chinese manufacturers' ability to compete, but it has also made supply chains a lot more complex, and manufacturers were keen for support to move operations and exploit growth opportunities in neighbouring markets such as Vietnam.

Ongoing deregulation of energy and utilities providers saw clients seeking consulting support to deal with the impact of the opening-up of the market, and the resulting

threat to revenues, though the energy & resources sector continued to be one of the slowest-growing markets for consultants.

The TMT market fared slightly better, with new regulations around foreign ownership of high-tech and telecoms industries shaking up the sector,³ leading key players to seek help in understanding and addressing the implications and exploiting the new opportunities on offer.

The small pharma market saw the joint-fastest growth, with demand expanding by nearly 12%. Both pharma and healthcare clients were keen to invest in new markets to achieve their growth targets, which created opportunities around M&A, location strategy, and risk work, as well as technology-enabled process improvement support. The even smaller retail market grew almost as fast, as Japanese retailers sought help to both expand to new markets and deal with encroachment from digital sources of competition such as Amazon.

Segmentation classification of consulting firms

Type M: Management consulting only

Type S: Consulting on strategic decisions and operations alongside M&Arelated work

Type A: Consulting alongside audit, tax, and corporate finance services

Type P: Consulting on people-related issues, but also investment advice, risk management, and in some cases, HR outsourcing and HR package implementation

Type T: Firms that either specialise in technology or combine technology, outsourcing, and consulting

Data & analytics—our definition

The rise of "big" data and analytics has been one of the defining trends in consulting and the wider professional services market over recent years. While much work is still focused on the basics—basic data management and the gathering and integration of data into coherent storage spaces—growth has been highest in advanced analytics (which goes beyond simple mathematical calculations to use mathematical and statistical formulas and algorithms to generate new information, to recognise patterns, and also to predict outcomes and their respective probabilities), data visualisation, and business intelligence.

Cybersecurity—our definition

Cybersecurity is one of the genuine "blockbuster" consulting services of recent years, fuelled by widespread public and board-level concern. Moreover, as new threats emerge, this is a market that's constantly evolving. Our definition of cybersecurity includes strategic advice around systems design, attack prevention, and response; securing systems, networks, and users through firewalls, endpoint security, multifactor authentication, etc.; business continuity and crisis management during and after a cyberattack; and testing a computer system, network, or web application to find security vulnerabilities that an attacker could exploit.
