Forecasts for 2025

Report

About us

We partner with professional services firms to turn insight into strategic advantage. Our proprietary research and tailored, firm-specific studies provide clear, actionable guidance to inform your firm's strategic decisions.

Through our work, we help professional services firms to:

- Anticipate key industry trends
- Identify and evaluate growth opportunities in existing and emerging markets
- Understand client perceptions and competitive positioning
- Refine propositions and messaging to better align with client needs
- Maximise the reach, impact, and commercial value of thought leadership

Three things for a firm to act on

2025 is set to be a year on the road to recovery.

2025 is set to be a year of recovery. And, in terms of clients' intentions to spend more on consulting support, this recovery looks to be dramatic.

For much of the last decade, most clients expected to increase their consulting spend on the previous year. Amid this positivity, 2018 stood out as being a rare period of pessimism when nearly 20% of clients expected to spend less on consulting services than they had in the previous 12 months. Then, in 2024, over 50% of organisations said they would decrease their spending—a shocking finding. In a year of economic and political uncertainty and instability, it appears that clients decided to wait and see, and to tread water on their investment plans.

The pent-up demand for investing in consulting projects has been building during this period. So much so that in 2025 over 90% of clients say they expect to spend more on consulting services.

This is not to say that the challenges clients face today are going away: They are not. Planning for contingencies, building resilience, and adapting business models to meet the needs of tomorrow are all still pivotal to future strategic decision making. But so is planning for growth. Clients are in the mood to focus on sales, marketing, and customer service functions as they target new revenue streams. Technology is the key that can make some of these growth initiatives real, and it is around investment in emerging technologies and upgrading existing infrastructures that clients will shape their plans for growth.

Financial services

Technology is the key opportunity in the financial services sector, but clients will retain an element of caution in 2025 when it comes to use of consulting

2023 was a disappointing year for consulting in the financial services sector, and it didn't fare much better in 2024. Growth in consulting demand improved a little—to 2.1%— but still lagged behind the market average (3%). Nevertheless, the financial services consulting market totalled \$78.7bn in 2024.

At a sub-sector level there were clear winners and losers, with private equity finally seeing a significant return to growth at 4.7%, while banking struggled to make much headway and finished 2024 fairly flat at 0.2% growth as interest rates stayed stubbornly high or didn't ease as expected, making clients jittery.

2025 looks set to be a far more positive year. We forecast 5% growth, although the sector will still lag just behind that of the wider market as it continues to feel the impacts of macroeconomic uncertainty.

Private equity should continue to see the largest growth rates, as deal activity begins to return, and clients make up for a number of slower years. Insurance and investment & wealth management will also outperform the overall market as they make up for lost time in terms of digital and customer experience investment. Banking clients will be increasing their spend on consulting, but will remain more cautious, with growth estimated at around 4%.

In 2025, however, more than nine in 10 report that they intend to increase their spend on consulting support (92%), with 43% indicating a rise of more than 10%. Nevertheless, firms should not assume this is a rebound; clients will still be putting pressure on fee rates and expecting significant results.

Our approach to gathering data

The market for professional services is vast and highly dynamic, with deep roots spread out across the business world. The Source MegaModel helps you get to grips with the facts.

The MegaModel is the largest and most comprehensive database of its kind, anywhere in the world. It's used by the world's leading firms to identify where growth is coming from, which markets to invest in, and which sectors are driving demand.

Methodology—The MegaModel

MegaModel: Our Global Data Model

The quantitative market data in this report comes from our unique model of the global professional services market.

Rather than making high-level assumptions, this model has been built from the bottom up, sizing the market capability by capability—assessing how much work a firm earns delivering each professional capability within each sector and country. This results in a robust view of the size of the supply-side market, which can then be broken down to view the size of the market by country, sector, line of business, capabilities, and service.

Alongside this market segmentation, we also limit our market sizing and analysis to what we at Source call "big consulting"—work done by mid and large-sized firms (those with more than 50 people). Please note that we don't track the long, thin tail of work done by contractors and very small firms, as most readers of this report would not seek or be able to compete in this part of the market.

All of the data in the model is calibrated through extensive interviews with, and surveys of, professional services firms and their clients, allowing us to discuss broader trends in the market alongside detailed dimensions such as headcount. These interviews and surveys are supplemented with desk research, which allows us to assess the impact of wider macroeconomic trends on professional services. This, combined with our detailed modelling, results in a long-term view of the market that is able to support both historic and forecast data.

All figures given in this report are in US dollars.

US dollar to British pound US\$1 = £0.78

US dollar to euro US\$1 = €0.92

The data in this report is rounded to the nearest whole number or stated decimal place. As a result, totals may display small discrepancies.

Meet the expert

Nick Jotischky

Nick is Head of Market Trends at Source. Drawing on over 20 years of experience in B2B research centred on macroeconomic and geopolitical risk, Nick leads the Market Trends programme, with a focus on assessing the landscape of the professional services market by region and sector and putting meaningful insights into the hands of firms.
